Ilyas Shaikh

Cloud data engineer | Python | SQL | Automation | Data migration |
SecOps | APIs | CICD | Git | MCA

India

Summary

"I'm someone who prefers getting hands-on with systems rather than staying at a surface level. I've worked on automation and infrastructure-related tasks, where I often found myself debugging, fixing issues, and understanding how things work internally. Detail-oriented Data Engineer with 1.5+ years of progressive experience in building and managing scalable ETL pipelines on cloud platforms using Azure, SQL, and Python. Proven ability to design efficient data workflows, ensure high data reliability, and deliver production-grade solutions using Spark, Delta Lake, and Airflow. Strong academic and research background with experience in automation, reflecting a deep understanding of performance optimization. Looking for opportunities in the Middle East

Experience

Drona Pay

Cloud Data Engineer

June 2024 - November 2025 (1 year 6 months)

- Design and maintain Airflow DAGs using Python and SQL to orchestrate daily ETL pipelines, automating

data replication from databases to Data Lake with Trino and Iceberg, reducing manual

processing time by 80%.

- Troubleshoot and optimize Airflow workflows, ensuring 99.9% uptime for scheduled tasks and resolving

pipeline failures within SLA timelines.

- Implement Spark-based ETL processes to transform and analyze large-scale datasets, improving data

processing speeds by 40%.

- Contribute to data architecture decisions, ensuring scalability and compliance with Azure cloud standards.

- Designed automation pipelines to generate DevSecOps reports, integrating tools like SonarQube and Snyk to ensure code quality and security compliance.
- Worked closely with development teams to streamline CI/CD processes using Jenkins, enabling faster release cycles.
- Automated repetitive tasks using Python scripts, saving hours of manual work per week.
- Built and maintained automation frameworks (Py Selenium) for testing and deployment, improving testing coverage by 60% and reducing manual QA efforts.
- Built and maintained Test Harness, an API automation testing application using Newman (Postman CLI), automating validation of multiple APIs and reducing testing time by 70%.
- Wrote Python scripts to integrate Newman with CI/CD pipelines, enabling automated API testing across development cycles.
- Collaborated with development teams to design test cases for RESTful APIs, ensuring 95% test coverage and early detection of defects.
- Documented test results and integrated reporting into Jenkins, improving visibility of API performance and reliability.

EXTION INFOTECH

Machine Learning Intern

January 2024 - April 2024 (4 months)

Pune, Maharashtra, India

Edunet Foundation

Student Intern

February 2024 - March 2024 (2 months)

Learning and leveraging IBM cloud skills, like but not limited to IBM Watson. We embarked our mission and made a competitive project using IBM tools

Analystt.AI

Python Developer

September 2023 - January 2024 (5 months)

- Contributed to Django-based web application development, implementing backend features using Python to support business requirements.

- Wrote and executed Pytest scripts to validate application functionality, achieving 90% test coverage for assigned modules.
- Collaborated with senior developers to debug and optimize code, enhancing application performance and reliability.

Internshala

Student Partner
